With the construction of the Ulstein Arena, the Norwegian village of Ulsteinvik fulfilled a long-held dream. The striking building combines several facilities under one roof: a multipurpose hall, a library, a swimming pool and a climbing hall. Thanks to its attractive and modern design, the building quickly became the municipality's new landmark and a place where everyone is welcome. In the slightly hilly surroundings, the arena is experienced as a sculpture framed in RHEINZINK titanium zinc. The building owners had the façade clad in the prePATINA graphite grey surface quality.
